What is Root Cause Analysis?

Root Cause Analysis (RCA) is a systematic process for identifying the underlying causes of problems or incidents. Rather than treating symptoms, RCA helps you find and eliminate the source of issues to prevent recurrence.

Problem Identification

Clearly define the problem using the 5W2H framework (Who, What, When, Where, Why, How, How Much)

5-Why Analysis

Systematically ask "why" to drill down through layers of causes until you reach the root

Solution Development

Create targeted countermeasures that address root causes, not just symptoms

Problem

Equipment failure caused production delay

›

Why Analysis

- Why did the equipment fail?
- Why was maintenance delayed?
- Why was the schedule not followed?

›

Root Cause

Inadequate maintenance scheduling system

Powerful Features

Everything you need to conduct thorough root cause analysis and drive meaningful improvements

5-Why Analysis

Systematic drilling down to root causes using proven methodology

AI-Powered Insights

Conversational AI assistant that guides you through the entire analysis

Risk Assessment

Calculate Risk Priority Numbers (RPN) for prioritizing actions

Professional Reports

AI Assistant

Your AI Partner Throughout the Entire Analysis

From the first sentence of your problem statement to the final countermeasure, the AI assistant is right there with you — asking the right questions, surfacing insights you might miss, and keeping your analysis focused on the true root cause.

Conversational Problem Statement Builder

Chat naturally to craft a precise, structured problem statement. The assistant uses adaptive 5W2H questioning — asking only what's missing — so you build a complete picture without unnecessary back-and-forth.

AI-Guided Why Analysis

As you work through each level of your 5 Whys tree, the assistant suggests deeper follow-up questions, challenges assumptions, and helps you avoid stopping at symptoms rather than reaching the true root cause.

Always in Your Control

Every AI suggestion appears as a preview — you decide whether to accept, refine, or discard it. Nothing is applied to your analysis without your explicit approval.

AI Analysis Assistant Live

Let's start by understanding your problem. Can you describe what happened and when you first noticed it?

Our production line stopped unexpectedly this morning — output dropped by 40%.

Which specific equipment or process area was affected, and how long has the stoppage persisted?

Line 3 conveyor system. Started around 6am, still not resolved.

Were there any recent maintenance activities or configuration changes on Line 3 before this occurred?
